## Plumbing Repair Services in Utah

**At Beehive Plumbing in Utah, you can depend on us for all your Utah plumbing repair needs, regardless of the manufacturer of your plumbing fixtures.** We use only top-quality plumbing parts for our services to ensure that you will not experience the same problem again. When you work with us, you can expect that we will go beyond simply fixing busted pipes, drains, and unclogging toilets. We assess each situation extensively and find out if the problem is being caused by something else. Our experience tells us that when something's backing up and [clogging the drains](#), the root of the problem goes deeper. Even something as small as a leaky faucet or a toilet that's clogged up can mean something else, and it's important to have these problems addressed before they necessitate more costly repair work in the future.

**Our wide range of plumbing repair services includes:**

- **Faucet Repair** – Frequent use and hard water can wear down a faucet over time. If you have a faucet that is leaking or simply needs to be replaced, we can help you.
- **Toilet Repair** – There may be multiple reasons your toilet is not working correctly. Whether it requires the use of an auger to clear a blockage or the repair or replacement of components in the water tank, you can depend on us. We will have your toilet working correctly again as soon as possible.
- **Burst Pipe Repair** – A burst pipe may be the result of an uninsulated pipe being exposed to extremely cold weather or an old pipe that has reached the end of its working life. We will be able to repair a burst pipe in any part of your plumbing system.
- **Water Heater Repair** – A water heater may not work as it should if it has not been properly maintained. Sediments may build up near the water connectors or the lighter has corroded and has to be replaced. We can repair water heaters powered by electricity, gas or propane.
- **Garbage Disposal Repair** – A garbage disposal may be prone to clogging, especially if it is frequently used. If the blades have become dull or the disposal no longer turns on, our technicians can examine the disposal and replace any faulty parts.
- **Bathroom Tub and Shower Repair** – If the plumbing for the tub and shower is not working as it should, we can help. We can repair or replace any part of the system, from the fixtures to any hidden plumbing behind the walls or underneath the ground.
- **Water Softener System Repair** – A water softener system that is not working correctly can allow hard water into your home. This can result in hard water deposits on your water fixtures, sinks, tubs, skin and clothes. Our technicians can accurately determine the cause of the malfunction and successfully repair it.
- **Sewer Line Repair** – If your sewer line is backed up due to a clog, burst pipe or any other reason, we can repair it. We can use precise tools to identify exactly where and what the issue is and correct it.
